Green Energy - Solar Powered Since 2012. An Environmentally Responsible Company Since 1938!

In 2012, we installed a solar farm (panel array) on the roof of our Lawrence, Massachusetts facility and we are now utilizing 100% solar generated energy to power the manufacturing of our textile products.

Over 50,000 square feet of solar panels provide us with enough electrical power to run our entire building. Currently, we are utilizing only 35% of the total amount of solar power energy generated. The remainder of green energy produced is fed directly back to the power grid; providing heat and light to dozens of neighboring home and businesses.
